

ENERGY AUDIT

In the performance of energy management activities, an audit of the current energy operations will need to occur. At Able-Energy when we conduct an energy audit, we are basically seeking to identify where energy is consumed and how much energy is consumed in an existing facility, building or structure.

WE PERFORM AN ENERGY AUDIT FOR OUR CLIENTS FOR ONE OF THE FOLLOWING REASONS:

- Clearly identify types and costs of energy use;
- Understand how & where energy is being used and possibly wasted;
- Identify and analyse cost effective ways of using energy; and
- Perform an economic analysis on alternatives and determine the most cost effective solution, etc.

THE FOLLOWING BENEFITS CAN BE DERIVED WHEN OPTING TO CONDUCT ENERGY AUDIT FOR YOUR FACILITY:

- Identify potential electricity losses;
- Identify efficient energy use opportunities within your building;
- Develop an energy baseline in order to track changes and improvements to your energy use over time;
- Detail energy reduction with associated costs; and
- Identify the list of energy using equipment.

Ultimately energy audits form the basis of near all energy management interventions and planning for future energy efficient improvements.

To find out how you can benefit from these and other solutions please make contact:
