

UTILITIES MANAGEMENT AND BILLING

At Able-Energy it is our mission to save business organisations in the built environment money in their electricity bills. Utility costs are a major business expense. In today's highly competitive business environment, treating these costs like other raw materials is necessary to control expenditures.

At Able-Energy we provide a Utilities Management and Billing (UM&B) solution that enables industrial and commercial properties (malls and multi-tenant office buildings) to effectively bill tenants for their individual measured utility usage.

We take it as critical for our clients to understand and effectively control these costs to increase net operating income and profits.

TO LOWER YOUR UTILITY COSTS, WE'LL HELP YOU TO:

- Maximize cost recovery;
- Track and allocate energy use;
- Reduce energy usage and expense;
- Save time and resources; and
- Get the tools you need to manage your utilities more effectively.

THE FOLLOWING ARE SOME OF OUR SOLUTIONS ON (UM&B):

- Invoice processing
- Bill payment
- Municipal and tenant tariff analysis and optimisation
- Historical cost tracking
- High level systems Utility modelling and plant level operations planning during project development and prior to implementation.
- Seasonal energy usage
- Operations and shifts
- Invoice validation
- Recovery of incorrect charges

To find out how you can benefit from these and other solutions please make contact:
